LEAD's MCMW Video Codec is the multimedia compressor/decompressor that creates high-quality, small-sized video files from analog, mixed-format video files. LEAD's MCMW Video Codec is an all-in-one codec solution designed to compress and decompress in real time. LEAD's MCMW Video Codec works with any Windows application that can play or record. LEAD's MCMW Video Codec has wide tolerance for differences in media, bit-rates and different applications. LEAD's MCMW Video Codec uses an advanced 8x8-based wavelet based compression system with advanced techniques and features. The MCMW Video Codec's advanced compression techniques and advanced error concealment algorithms provide high quality, not only in compression mode, but in playback mode as well. The MCMW Video Codec offers a wide range of useful compression features, such as narrow bandwidth mode, low delay mode, precoding and bandwidth control. LEAD's MCMW Video Codec is an optimized codec for digital video content. What makes this codec so unique is that it is a decompression/compression module integrated to the Windows Multimedia subsystem. LEAD's MCMW Video Codec works with any Windows application that can record or playback. "RAW" or "RAW+", LEAD's MCMW Video Codec is designed to compress "RAW" (uncompressed) files. The "RAW+" mode of the LEAD's MCMW Video Codec offers performance superior to any other compression/decompression product available on the market today. The LEAD's MCMW Video Codec supports multiple bit-rates in "RAW" and "RAW+" modes and can work well with source-cameras with multiple resolutions. The LEAD's MCMW Video Codec is an "out-of-the-box" solution that is supported in Windows and other operating systems. LEAD's MCMW Video Codec can deliver incredible savings in bandwidth. It is designed to compress streamlets of video much smaller than any other existing compression products in the market. LEAD's MCMW Video Codec is an all-in-one solution that allows compression and decompression at the same time. This codec uses an advanced state of the art wavelet based compression system that utilizes the most advanced features and techniques. What's New In?

LEAD MCMW Codec provides plug and play support for the Video 1 layer and can decode AVI files up to V1.1, MPEG-2, VC-1 and RealVideo with very good quality. LEAD MCMW supports the MPEG-1, MPEG-2 and VC-1 video standards. LEAD MCMW was developed to enhance the performance of standard video coding algorithms (similar to how JPEG was developed to enhance the performance of standard compression algorithms). The LEAD MCMW Codec decodes standard compression formats with comparable output to a decompressor. If the output quality is not good, the user can increase the compression by increasing the number of quality control passes through the output. "LEAD MCMW Video Codec":

- Features compress/decompress AVI video files using many different video file formats.
- Features multiple codecs with different bit rates and resolutions.
- Supports all the AVI standards: AVI1, AVI2, AVI3, AVI4, AVI5, AVI7, AVI8, AVI9, AVI10, AVI11.
